LIVE STREAMING CHECKLIST

TO ENSURE SMOOTH STREAMING

○ **Restart All Livestreaming Devices**

Restarting all your live streaming devices like your encoders, microphones can help your devices perform better.

○ **Charge All Livestreaming Devices**

Even if you anticipate the live stream will be fairly quick in length, we would still suggest you fully charge all your live streaming devices before going live, just in case.

○ **Bring a Power Bank**

Plug your live streaming devices to a nearby outlet or bring a power bank with you, especially when the streaming requires constant mobility.

○ **Test Internet Connection**

Conducting a speed test before a live stream lets you know how well is your internet connection, and what resolution to choose to handle the quality of your broadcast in advance.

○ **Test All Livestreaming Gears**

Testing every piece of streaming gear before going live gives you the reassurance that everything is working properly. Microphones and cameras are of the highest priority.

○ **Setup a Test Live Stream**

Test streams are the perfect way to check and make sure your livestreams will run smoothly without any hiccups.

○ **Prepare Videos and PDFs If Needed**

A live stream with a well-crafted high-quality intro and outro make it look more professional. YoloBox/Pro supports 2 SD card videos and 1 PDF.

○ **Customize Graphic Overlays**

Graphic overlay is a great way to brand your live streams. YoloBox/Pro offers a bunch of graphic overlays like logos, lower thirds, countdown timer and multiple styling options.

○ **Make Sure Video Storage Have Enough Space**

If you expect that the live stream will be pretty long and you want to record it as well, be sure to check the video storage, whether an SD card or a hard drive to make sure you have enough space to save the whole video.
